ABSTRACT OF THE DISCLOSURE

An example [[A]] communication apparatus is capable of performing communication with an ~~the~~ information server in ~~the~~ first and second communication modes[[,]]. After ~~after~~ establishing a connection with the information server in the first communication mode and receiving ~~at step S101, receives~~ an information acquisition request ~~from the operator (S102)~~, the communication apparatus stores a ~~the~~ condition of the communication connection with the information server ~~at that time~~ as connection information ~~(S104)~~, disconnects the communication in the first communication mode ~~(S105)~~, establishes a connection with the information server in the second communication mode ~~to perform switching of communication mode (S106)~~, and restores the communication connection with the information server ~~condition~~ based on the stored connection information ~~stored when the communication in the first communication mode is disconnected (S107)~~.
